

## STAKEHOLDER ANALYSIS TOOL TEMPLATE

### PART 1: ANALYSIS

Company Name: The Boeing Company

Reviewer Name: Brian Morman EMBA 60

Date of Analysis: 12/12/2024

Briefly describe the new venture, strategic initiative, or project you would like to accomplish: At Boeing, I work for a group called AvionX. We are a relatively new business unit that was created nearly five years ago. The goal of our group is to in source electronics design, build expertise in avionics design, and to change up the dynamic of Boeing's supplier relationship with out of house electronics design companies that were able to take advantage of Boeing's lack of expertise in this area. I joined Boeing this year and in my earliest days networking outside the group I discovered that AvionX has a very poor reputation inside Boeing. Program teams view our group as inexperienced, expensive to work with, and prone to making significant errors in our process to quote project time and expense. Because of this reputation I have found that project teams inside Boeing are trying to avoid hiring our team to design their electronics which reduces our teams income and prevents us from meeting our strategic objectives. Behind the scenes, I understand that the AvionX team had one high profile miss in estimation that cost a great deal of money to one of our product lines. Since that time AvionX has executed several projects successfully, hired a great deal of new talent, and overhauled our business processes. With several big project opportunities coming up, our team has an opportunity to tell a new story about who our team is and the value we bring to our internal customers.

| Stakeholder                                   | Interests/Expectations<br>Put a (+) beside those interests/expectations that you believe will have a positive impact on your goals/strategy and a (-) beside those that you believe will have a negative impact. | Importance<br>1=Low 3=Neutral<br>5=High |
|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| Internal Customers – Project management teams | + These are our primary customers. My team quotes work internally to act as a supplier of hardware for Boeing project teams. These are the individuals we most need to influence.                                | 5                                       |
| Executive Leadership – Program Planning       | + This is an extension of the above. These are the managers of our primary customers. We need to improve our reputation here because our customers have to sell us upwards.                                      | 5                                       |

## STAKEHOLDER ANALYSIS TOOL TEMPLATE

|                                                          |                                                                                                                                                                                                                                                                                                                                                                                                |   |
|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| Technical leadership – Subject Matter Experts            | + SMEs are the trusted advisors of the groups above two stakeholders. Typically, these individuals are more focused on the proposals they receive than the perception of our group. If we do good work now they will help our cause regardless of reputation.                                                                                                                                  | 3 |
| Adjacent Business Units – Boeing Research and Technology | + BR&T is an adjacent business unit that shares key learnings to us. If we can increase the relationship here we can leverage key learnings to become a more capable team. This relationship needs to grow to create synchronizations in our goals. BR&T has a broader goal but does include ours.                                                                                             | 3 |
| New Business Development Team                            | - This group is responsible for relationships with external customers and do the job of communicating our capabilities externally. This group is fundamentally a + to our goal but in recent years have shown a propensity to over promise or target the wrong kind of work for our strategy to succeed. It is a young group who need some more education from us to improve our relationship. | 3 |
| AvionX Leadership                                        | + This is our team's executive leadership. They are obviously invested in our success and are doing the same work I am describing.                                                                                                                                                                                                                                                             | 3 |

## STAKEHOLDER ANALYSIS TOOL TEMPLATE

### PART 3: STAKEHOLDER ACTION PLANNING

| Identify three key issues you need to resolve based on your stakeholder analysis. |                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Issues                                                                            | Actions                                                                                                                                                                                                                                                                                                  | Comments                                                                                                                                                                                                                |
| Logic trust wobble with our internal customers                                    | One of the best ways we can show that our logic is firm is to execute some successful projects. To do that, we can execute some design work using internal research funds and show a strong product line with a track record of success on our own.                                                      | This is going to be a great challenge in our near future. Boeing's cash problems are making research funds scarce. We will have to look for low expense projects to execute on budget.                                  |
| Authenticity trust wobble with business development                               | Our team will host learning sessions and work in matched pairs with the business development team to exchange knowledge and explain what capabilities we have now and what we want to grow so our customers know they can trust the promises made by business development                                | The importance of this task has been underestimated in the past. Our BD team understand airplanes very well but electronics less so. They have promised too much in some cases which starts a bad cycle of trust early. |
| Remove roadblocks to communication and improve our ease of integration.           | Our internal processes cause us to heavily scrutinize the same work twice. In this way we lose all benefits of working Boeing to Boeing and treat our own teams like two separate companies. Our processes need to allow for more trust internally or we may be better off doing AvionX work externally. | This type of process does not exist right now and will take some time to set into motion.                                                                                                                               |
