EDUCATION

Wash U – St. Louis, MO

Executive MBA Program – EMBA 60

August 2024 – April 2026

University of Louisville – Louisville, KY

Graduated July 2019

M.S. in Electrical Engineering

University of Dayton – Dayton, OH

Graduated May 2016

B.S. in Electrical Engineering

CERTIFICATIONS AND ACCOMPLISHMENTS

Reliability Practitioner

Sept 2022 - Present

- Voting member AP3 FRACAS board - engineering approver
- GE certification for MTBF estimation and failure reporting compliance (1 of 3 in electronics)

Connected Data Practitioner

Sept 2022 - Present

- Certification for using Big Data analysis to drive requirements, test plans, and design procedures.

WORK EXPERIENCE

The Boeing Company – Hazelwood, MO

Senior Electronics Systems Engineer (E4) – AvionX DMC

April 2024 – Present

- Lead Electronics Engineer, Integrated Product Team Lead, and Cost Account Manager – BCA Intelligent Wireless Application Server Unit (iWASU) – managing key deliverables, estimation, staffing, and hardware requirements for the Connected Cargo project iWASU.
- Lead Electronics Engineer – Main Mission Processor (MMP) – managing MMP design through preproduction and transfer of work to move box production to Heath Ohio for final assembly.
- Lead Electronics Engineer – RAFTS and mMOCA – lead project planning, architectural design, and estimation for two DMC Futures products.

GE Appliances – Louisville, KY

Senior Digital Program Manager (P3) - Dish Software

April 2023 - April 2024

Responsible for execution of digital updates, for the smart HQ app, Firmware over the air updates, and cloud/ data lake projects relating to dishwashers under the GE Appliances family of brands. Drove project execution and prioritization for a team of 15 developers.

- Manage priorities and write technical specifications to drive, firmware, app, and cloud development of new dishwasher features.
 - Integrate work from three separate agile workflows using, GitHub, Zenhub, and JIRA tools as technology representation of Dishes Stakeholders by working hand in hand with Product Management
- Lead the project schedule, milestones, cost, and requirements of quarterly embedded software updates to be dispersed by over the air update to customer controls.
- 2024 Dishwasher Sourced New Product Platform Software Management
 - Lead scrum, and managed requirements for a team of embedded software developers working for a third party to execute an embedded and connected software strategy to meet the needs of a new product platform relating to the dish business.

Senior Electronics Program Manager (P3) - Dish Electronics

July 2021 - April

2023

Responsible for the launch of all electronic and harness parts for the 2022 Artemis NPI.

- Electronics core team representative for 2022 and 2023 Artemis Program
 - My role consisted of, part design manager, part program manager driving execution of controls, harnesses, and software for the Artemis NPI with an emphasis on safety, quality, performance, reliability, cost, and conformance.
 - I owned key process steps for dish electronics including E-reviews, product technical specifications, and regulatory conformance, and software requirements for the ongoing AAA new product introduction program.
 - Utilized the visual task system of “Lean Product and Process Development” I set milestones, identify risks and milestones for the Dish electronics NPI team.
 - Launched the first dual sourced brushless-DC wash pump in the dishwasher industry.
- AP3 Failure Reporting And Corrective Action System (FRACAS) Review Board Voting Member - Engineering Approver
 - Through engineering test procedures, reliability testing, and connected data research I have lead the team to identify and close > 50 controls and software based Fracas items
- 2023 Artemis Software Scope Agreement Author
 - Working with product management and the Dish scrum, I authored the requirements specification for the NPI. This is the first SSA published in the Dish group.

Design Engineer (P2) – UI Dish Electronics Design Engineer July 2019 - July 2021

Responsible for the role of Project Manager on all UI BCR's and Lead UI Engineer

Program Manager for Part-Shortage BCR's (End of 2020 – Present)

- I was the Project Manager for many open dish BCR's, but primarily focus on three that constitute high speed, high pressure redesigns of 8 of the 10 electronic UI's in the product line.
 - These three Design Change Requests were mission critical redesigns to prevent the shutdown of 4 out of 5 manufacturing lines in AP3.
 - In this role I gained a high level of expertise in schedule making, test plan writing and execution, building on my experience in the iNPI process, and leadership for my team of young engineers in Dish.

Brian Morman

913 Penny Lane, Ballwin MO, 63011

Phone: (513) 833 – 6263 Email: bmorman16@gmail.com

- Responsible for the day-to-day activities of one co-op and one Edison Engineer at a time. In this role, I have managed 6 co-ops and 4 Edison Engineers throughout my time in Dish.

Swordfish Phase 2 (End of 2020 – Present)

- User Interface team leader - Dishwasher
- In doing this I lead pulsing both internally to the electronics team and outwardly to the dish team. I also handled the design of the second generation of cap touch UI's in AP3. In doing so, I created a new and less conservative set of constraints for cap touch layout resulting in a pass to EMI testing and reliability testing before pre-pilot and a cost out of around \$3.60 out for and 8 button UI resulting in just under \$1 million in savings annually for the business.
- I have been instrumental in the planning of implantation of the AP3 RAST and harness strategy by completing full system cost roll ups, quoting multiple suppliers, and setting a plan for UI and MC harness architecture for the future of AP3.

Swordfish Phase 1 (July 2019 – End of 2020)

- 2020 into 2021 Swordfish phase 1 I was AP3's only UI engineer and owned scoping for all UI designs, while working with project management to define dishes architecture strategy for RAST Harnesses and low end UI's implementing the low pin count harness strategy we are now in and leading the scoping and design of the 1 button UI.

Edison Engineer (P1) – UI Dish Electronics Design Engineer July 2018 – July 2019

5th Rotation

Responsible for scoping and managing the design of a sourced LCD control and housing from Panasonic/Sanyo in Japan

- 2019 Stainless Program – Café LCD scoping and design from DG to Pilot as well as the Monogram UI's design and management along with continued support after program launch. This was a sourced design that gave me deep experience in program management, GEA software structure, and experience leading a team of engineers (in this case overseas). In this role I gained strong experience in working cross functionally teaming up with a pair of mechanical engineers to design the LCD mounting system and housing as well as working with IDO to determine a user friendly screen flow and screen design for a new LCD design.

Brian Morman

Phone: (513) 833 – 6263 Email: bmorman16@gmail.com

Edison Engineer (P1) – Power Electronics Design Engineer

January 2018 – July 2018

4th Rotation

Responsible for testing room air inverter control designs and developing test procedures for the AP2 Zonline software and SWQA teams.

- DG design testing for Next Gen Zonline NPI – conducted ETP910E and C testing
- DC design testing for LCI NPI – conducted ETP910E and C Testing EMI and Reliability testing
- Engineering tool design – Next Gen Zonline PCBA load box

Edison Engineer (P1) – Range Electronics Design Engineer

July 2017 – January 2018

3rd Rotation

Responsible for electronics review planning, testing, and completion as well as electronics build management at Roper for LCD wall oven. Responsible for scoping and testing low cost induction UI design changes for material cost take out.

- Supported LCD Wall oven from DC1 until Pilot – facilitated and led e2 and e5 builds. Completed FMEA and EMI testing
- Low Cost Induction UI from DG to DC1 – lead management of 5 designs to a product cost takeout of ~\$350k/ year
- Engineering Tool design in LVDS probing control. Impedance matched 4-layer board design to allow for digging into LVDS signals for troubleshooting. Design was based on LVDS white paper from TI
- Antenna design – B2 project for wireless temperature sensing of meat using an antenna with only passive circuit components

Edison Engineer (P1) – Laundry Electronics Design Engineer

January 2017 – July 2017

2nd Rotation

Responsible for coordinating a product plan between Mabel engineering and AP1 Product Management, developing the GEA3 communication specification, and managing service software releases through the BCR process.

- Supported Global Front load program in coordination with Haier and Mabe
- Payload Manager for software and service releases
- Developed GEA3 communication hardware specification and tested the design against key noise parameters with the guidance of AP1 principal engineers.
- Centauro program DG coordinating GEA product management to Mabe engineering group to determine deliverables and product cost.

Brian Morman

913 Penny Lane, Ballwin MO, 63011

Phone: (513) 833 – 6263 Email: bmorman16@gmail.com

Edison Engineer (P1) – *Dish Electronics Cost of Quality Engineer* July 2016 – January 2017

1st Rotation

Responsible for AP3 harness cost of quality reduction through the generation and completion of business change requests in coordination with AP3 technology, safety, quality, lean, and operations.

- Achieved \$233k in COQ reduction
- Corrected 3 ergo red items in AP3 manufacturing.
- Researched, tested, and finally wrote a test plan for a new ETP to the dish group for bulk cable injection as a result of an extremely challenging FRACAS item that was root caused to a new version of EMI noise dishwashers are susceptible to in a hotel setting
